

Figure 6. The effect of the number of nodes on the performance of the proposed algorithm. The figure shows two bar charts side-by-side. The left chart is titled 'Number of nodes' and has values 10, 20, 30, 40, 50, 60, 70, 80, 90, 100 on the x-axis. The right chart is titled 'Number of nodes' and has values 10, 20, 30, 40, 50, 60, 70, 80, 90, 100 on the x-axis. Both charts have 'Performance' on the y-axis ranging from 0 to 100. The bars represent the performance of the proposed algorithm for different numbers of nodes. In both cases, performance increases as the number of nodes increases, reaching a peak around 60-70 nodes before slightly declining or stabilizing.
